EDUCATION

Queens College, City University of New York (CUNY)

May 2026

B.A Computer Science - Dean's List

Relevant Coursework: Databases, Data Structures & Algorithms, Software Engineering, Web Technologies, OOP (C++ & Java)

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript (Node.js, Express.js, Hono, Bun), C++, SQL, Bash, HTML/CSS

Frontend: React 18, React Router, Vite, TailwindCSS

Cloud & Infrastructure: Microsoft Azure (Cosmos DB, Container Apps, API Management, Application Gateway, Key Vault, Event Hubs, Container Registry, AI Foundry, VNet, Managed Identity/RBAC), Google Cloud Platform, Bicep (Infrastructure-as-Code), CI/CD & multi-environment deploys, Cloudflare Pages/BFF, secret management

Data, APIs & Auth: Cosmos DB (NoSQL), MongoDB, SQL, RESTful / v1 API design, WorkOS, OAuth, SSO/SCIM

Tools & Practices: Git/GitHub, Jira, Figma, contract & unit testing, code review, monorepo/workspaces, Agile/Scrum, Prompt Engineering

PROFESSIONAL EXPERIENCE

Augenta AI | Pre-Seed

March 2026

Forward Deploy Engineer

Manhattan, NY

- Designed and shipped a full-stack web application from scratch a modular, provider-neutral TypeScript package, a REST API, and a React dashboard (API-key management, workspace settings, member admin) a 6,300-line, 124-file build on a ports-and-adapters architecture.
- Built the React dashboard surfaces (React 18, React Router, Vite) wired to backend services through a Cloudflare Pages BFF, delivered in an agile issue → PR → review workflow.
- Solved a production sign-in failure that only surfaced on preview deployments, traced it to a cross-origin redirect issue and fixed it with a unit-tested edge-rewrite, restoring auth on every preview link with zero per-build config.
- Modeled the platform's data in Cosmos DB with partition keys chosen for the hot paths, and kept services correct with a shared contract test holding a local and a Cosmos adapter to one interface.

Morgan Stanley

January 2025

Software Engineer Intern

Manhattan, NY

- Contributed to **schema design for resource types** in the Ansible Automation Platform (AAP), collaborating with senior engineers to standardize configuration across the platform.
- Implemented **granular validation logic** for AAP change management under team guidance, improving data accuracy ~22% and reducing manual validation time ~15%.
- Helped streamline the **emergency change-request workflow**, contributing to ~26% faster resolution of high-severity incident tickets.

PROJECTS

UP! | Real Estate Insight Dashboard | *React.js, TailwindCSS, Cloudflare, JavaScript, Rapid API*

September 2024 - Present

- Built a property-analysis dashboard that translates complex real-estate data into actionable ROI insights for non-expert investors.
- Integrated RapidAPI for real-time housing data and financial modeling; deployed and served via Cloudflare.

Polly AI | Multimodal Feedback Platform | *React.js, Python, TailwindCSS, DeepFace, Google APIs, GCP*

October 2025

- Engineered real-time emotion and audio analysis running at 30+ FPS, collaborating with engineering to define and deliver requirements.
- Validated product impact through data: users improved scores 56%.

LEADERSHIP

ColorStack - Queens College

November 2025 - May 2026

Founding Treasurer

- Managed a \$2,300 budget and led fundraising generating \$1,000+ in additional capital, ensuring financial sustainability for 50+ members.

ASCEND (Accelerating Space Commerce, Exploration, and New Discovery) - Queens College

September 2024 - May 2025

Director Of Marketing

- Led a 15-person team to grow membership by 25%; analyzed cross-channel metrics to iterate on campaigns, lifting digital engagement 50%.
